

Technical Information

Length:	1330mm
Width:	710mm
Height:	880mm
Capacity:	210 litres
Filler neck:	2" BSP
Fuel delivery:	Hand pump c/w hose and 3/4" nozzle

Product Description

210 litres bunded petrol caddy. Ideal for collecting quantities of petroleum from a petrol filling station, and thus avoiding the hazards of collecting small amounts of petrol in jerry cans. It is high security, integrally bunded, has a painted steel construction and comes fully fire protected. The unit should be sited in the open air two metres away from any buildings on a concrete base. The petrol caddy is designed and manufactured to meet the Requirements of: HSG176 (The Storage of Flammable Liquids in Tanks) and HSG51 (The Storage of Flammable Liquids in Containers). The barrel conforms to UN 1203 and meets ADR transport Regulations.
