

YOUR EXPERTS IN DE-ICER STORAGE

Quality Tanks from the UK's Leading Airport Storage Manufacturer

TUFFA UK ARE THE ONLY MANUFACTURER PRODUCING LARGE SCALE DE-ICER STORAGE CONTAINERS OUT OF POLYETHYLENE. THE SYSTEM IS DESIGNED TO BE COMPATIBLE WITH THE CHEMICAL STORED TO ENSURE PROLONGED USAGE AND DURABILITY. OVER THE PAST 10 YEARS TUFFA UK'S DE-ICER SYSTEMS HAS BECOME THE FIRST CHOICE FOR AIRLINES AND SERVICE COMPANIES THROUGHOUT EUROPE, WE ARE NOW THE LEADING MANUFACTURER FOR BULK DE-ICER DISTRIBUTION SYSTEMS.

The busy timetables operated by airlines do not allow for grounded aircraft due to poor weather conditions, so efficient defrosting and de-icing of aeroplanes and runways to keep to schedule is imperative. Large quantities of the de-icing agent need to be on hand at the airport to allow instantaneous action for when a drop in temperature occurs.

WE HELP YOU FLY FROM THESE AIRPORTS...

SPECIFICATION

- 1350 - 100000 Litre capacities
- 0 - 700 Litre per minute Pumps
- Various inlet/outlet connections (camlock/BSP)
- Level Gauges and Leak Detection
- Service & maintenance Valves
- Lockable Equipment cabinet
- Armco Protection Barrier

BENEFITS

- Manouverable
- Interlink tanks to increase capacity
- Reliable & durable measuring & dispensing equipment
- Bunded tanks to prevent spillage
- Tried and field tested system
- Electronic and Mechanical options available

"HELP TO KEEP PLANES OFF THE GROUND WITH TUFFA DE-ICER TANKS"

HEAR ABOUT US FROM SOMEONE ELSE:

"The sales team at TUFFA UK were very helpful and attentive and their engineering expertise was very impressive. They produced a very competitive and timely solution to our needs."

"As static, fixed tanks are extremely expensive, require bunding, and would need to be positioned and then could not be moved, the interim more flexible and lower capital cost solution was to purchase some Tuffa Tanks, as used by Bristol Airport."
